GLADIOLUS

JEANIE

By D. S. Pruitt

SEASON OF 1941

Pruitt's *Glad* Gardens

Box 402

EUGENE, OREGON

GREETINGS...

We wish to thank our many customers and friends for their fine orders this last year and may the coming year be as good or better. It came near being the best, from the many very fine letters we have had this past season we believe it was a successful year with our customers. If we have not already written private letters, we want to especially extend our thanks and gratefulness to the many who wrote us commending our own introductions.

Our sympathy goes out to the growers in the war-stricken countries. We feel very fortunate in not having had the conflict at our back door in 1940. May 1941 be as fortunate for us.

We could fill a number of pages with testimonials, but time and space will not permit. The past summer we grew many new varieties for the first time, and will say we were very much more impressed with them as a whole, than in any previous year. When I first began hybridizing a friend who professed to know said, "You are wasting your time; the field has been fully covered." Well, this was quite a hard knock for a new beginner. However, I would not give up. Now the longer the work goes on the more we feel we have just begun. Give the GLAD world 10 years more and we believe it will work wonders.

Just a few words about the new varieties that attracted our special attention last summer. To buy and grow all the new varieties that are coming out would be too much work, to say nothing of the cost. Although we only grow a small percentage of them, together with our own seedlings, we manage to keep very busy in blooming time.

We note a number of fine looking pictures and new varieties listed in the late catalogues. Quite a temptation to buy them all, but we must restrict our buying to only a part of them. Of course we would like to get the tops of the few we do get, but how much we miss it we never know until we see them all in bloom. Last year we bloomed more than usual and will say had more outstanding flowers than in any previous year. Hope this coming summer is still better in that respect.

Helen of Troy and Sensation were the two most outstanding ones we grew. Helen of Troy is a very unusual pink with darker throat. Truly wonderful. Sensation is properly named. We hope to see more of them both this year. Roman Gold and Bingo by Mr. Canine were very outstanding. We think Roman Gold the best we have seen in its class. Ardent by Mr. Mitsch is a lovely red which we think will be very popular. Also his new yellow, Alchemist, is a very delicate shade and pure in color without any throat mark. The Palmer varieties we tried were all good. Glamis gave us one of the finest blooms we had all summer. A salmon with cream throat. Vassar is truly wonderful in color if it would grow taller. Hope to see it stretch out more this coming summer. Carillon was fine with us and we predict it will be a real commercial. A lovely ruffled pink with cream throat; a fine propagator. Master Myron grows a very fine long spike with large flowers. Fine red, we think. Intrepid by Milton Jack is a very fine variety in its class. Of the older varieties which gave good accounts of themselves are Aladdin, Peggy Lou, Coral Glow, Rima, Zuni, Greta Garbo and Algonquin. Also King Lear must be mentioned as the best purple we have seen.

People who have never grown glads do not know what an interesting hobby or business it is.

Try some of the newer varieties and I am sure you will be well paid for your trouble. Buying a new variety that comes well recommended is a sound investment, not altogether a luxury.

MR. AND MRS. D. S. PRUITT.

All Ruffles

The ruffled seedling we featured in last year's catalogue gave us a fine increase which we did not expect from the previous year's increase. If it performs well and gives as good increase next blooming we will release it in 1942. We are calling it All Ruffles for a garden name. However, we plan on giving it a name when introduced.

So many ruffled glads coming out the last few years, we can scarcely say it is the beginning of a new race, but we will say it is indeed very beautiful both in color and ruffling. It is a seedling of Ruffled Princess, coming indirectly from New Era and Picardy, a LaFrance pink. No bulbs to be let out this year.

How and Where to Grow Glads

Be sure to give them full sunshine if possible. Do not grow them against a building. Be very careful in using barnyard manure.

Any good garden soil will grow good flowers if watered properly. Do not depend on a light sprinkling each evening to be sufficient water. Most of such water goes up in hot summer and never reaches the subsoil. Make a shallow trench 8 or 10 inches from the plants or between the rows and let the water run until the ground is thoroughly wet. The length of time this will take depends on the nature of your soil. This need not be done every day. Large bulbs should be planted from 4 to 8 inches deep and three or four to the foot in the row. Some good commercial fertilizer is good for best spikes. Be careful not to use too much.

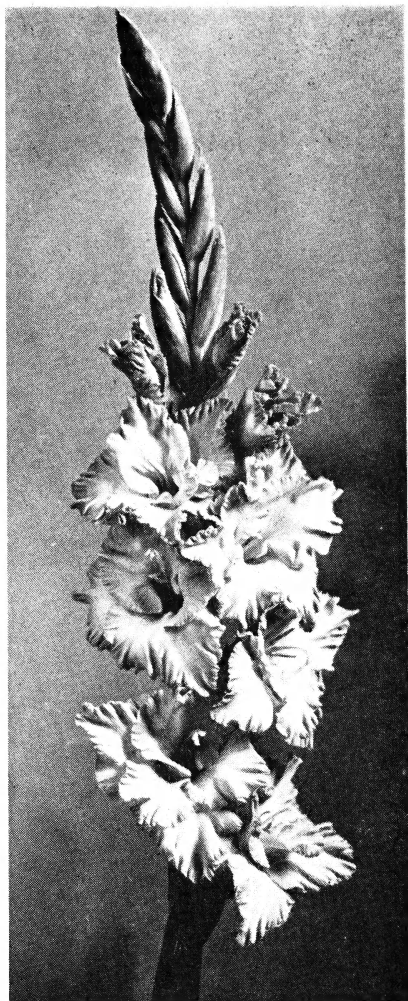

For a long blooming season plant all sizes of bulbs and if you live where bulblets have time to bloom you will be surprised the nice late flowers you will have from some varieties of bulblets. It must be remembered some varieties will not bloom much from bulblets the first year. Take the larger bulblets and plant them eight or ten to the foot for best results.

Some of the standards we know to be good bloomers from bulblets and smallest bulbs: Picardy, Aladdin, Coral Glow, Vagabond Prince, Early Peach, Valeria, Myrna, Dr. Bennett, Dream o' Beauty, Shirley Temple. These are only suggestions and it must be remembered Oregon is a long season part of the country along the coast and bulblets in shorter season parts might be a disappointment. However it is worth trying.

Be sure to treat your bulbs for thrip, no matter where you get them. To kill thrip 100 per cent is a real task. There are a number of liquid treatments that will kill thrip. Naphthaline flakes will kill them in three weeks if kept in a warm place where the eggs will hatch. Place the bulbs in a close container, not metal, but wood, or best, paper bags, and add naphthalene flakes at the rate of 1 ounce to every 100 bulbs. If the bulbs are extra large, the proportion of flakes should be somewhat increased. The bulbs should be kept in the flakes for three weeks or month in a warm place 60 to 70°F. After three or four weeks remove the flakes and transfer the bulbs to open trays or boxes in a cool room that is free from frost.

To dip the bulbs before planting is another good experiment. Lysol is best. Use 4 teaspoonsful to 1 gal. of water and immerse bulbs for six hours. Can be done two or three weeks before planting. Treated bulbs should be stored in a room away from untreated bulbs.

SPRAYS—It is well to spray the plants as soon as they are three or four inches high every week until about ready to bloom, with Tartar Emetic. Water, 10 gallons; Tartar Emetic, ½ pound; brown sugar, 2 pounds.

ALL RUFFLES

Shirley Temple

A most beautiful gladiolus. Produces excellent spikes of the softest, yet richest deep cream color without suggestion of yellow. Flowers ruffled and very large.

In spite of its temperamental habit it is selling in great quantity. We suggest you try the smaller bulbs if you live where summers are hot, and you will be surprised at the fine flowers you can get from small bulbs and even large bulblets.

SHIRLEY TEMPLE—Grown from small bulbs.

Queen Marilyn

Queen Marilyn is a lovely new creation as it performs with us. When first seen its name was to be Pruitt's Triumph. But it developed such wonderful delicacy we decided it should have a feminine name.

A large clean cut, recurved flower on a very slender, wiry stem. One which you want to run to get near when seen among other glads. A light shell pink with lovely cream throat. A pencil stripe sometimes circling the cream throat of a richer pink.

	Large	Medium	Small
Each	\$.50	\$.30	\$.15
10	3.50	2.50	1.50

Bulblets: 10, 80c; 100, \$4.00.

Ruffled Princess

A beautifully ruffled variety. Almost as ruffled as the seedling shown on page 3. In color it is just a trace lighter than New Era, although no relation to New Era that we know of.

A large exhibition flower, six and sometimes more open at one time. Not a tall grower but a very fine keeper when cut.

Those who wish to get some fine ruffled seedlings will be delighted in the results from it.

10	5.00	3.50	2.00

Bulblets: 10, 80c.

Jeanie

Our Only Introduction This Year

(See illustration, front cover.)

The picture shown was taken from flowers grown from No. 5 bulbs. We are not introducing this seedling as an exhibition variety. Neither is our price an exhibition price. But we do think it is worthy of introduction. In color it is a rich pink without flecking; white midribs and light cream throat. Grows medium height with stiff wiry stem that never crooks. Has four to six quite large flowers open at a time. Fine keeper when cut. Propagates fast enough for a commercial. Bulblets bloom in our climate.

We might say here that we have a number of very promising seedlings we could release this year, but would rather grow them another season in order to accumulate more stock; thus a cheaper price.

Our usual guarantee goes with Jeanie. If you are not satisfied with it after growing it you may exchange it for like value of any we list in our catalogue.

Price prepaid to you:

100	15.00	10.00	7.50

Bulblets: 10, 50c; 100, \$3.00.

Donna

A seedling from Wasaga and Shirley Temple. A more beautiful color could scarcely be imagined. An orange buff or might be called an apricot, almost a self color. It is a decorative in size. As a cut flower Donna will keep with the best of them. For ruffled beauty it is great.

	Large	Medium	Small
Each	\$.50	\$.30	\$.15

Bulblets: Each 10c; 10, 80c.

Ellen Marie

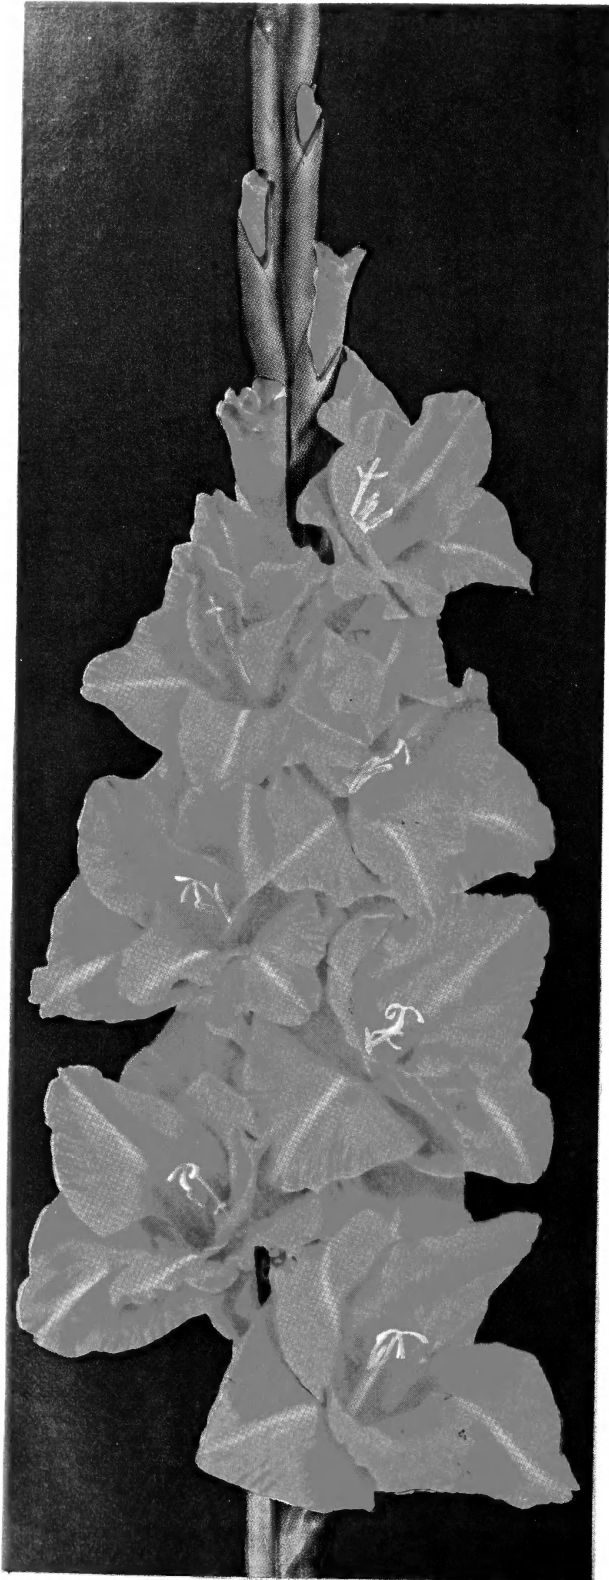

Seedling No. 49-34

(By D. S. Pruitt)

Ellen Marie, named for my wife, was introduced in 1938. This is a wonderful glad. Very large and beautifully ruffled. In color it is grand; hard to describe. I will say a very rich salmon pink, with light buff throat mark. Almost a self color without flecking. Early bloomer, growing medium high. Stiff wiry stem that never crooks, but the flowers are so large and heavy it will bend the plant over if planted shallow in loose ground, as all large bulbs should be planted much deeper than most people plant them. I will say be sure and get them 5 or 6 inches under the level surface of the ground, not 5 or 6 inches under the top of the ridge thrown up in making the furrow and covering. This beautiful new variety has been bloomed four times the same as the other two new ones I am releasing along with it, making sure it is well established. Get started now and grow up with it.

	Large	Medium	Small
Per 10	\$.50	\$.35	\$.20

Bulblets: 100 for 25c.

Valeria

Seedling No. 38-34.

(Pruitt)

I am sure this lovely flower has a great future both as a commercial and exhibition. Said by one grower to be the perfect glad. A rival of Dr. Bennett, much better in every way, a soft red with a narrow mark of light cream in the throat. Stands heat very well; never crooks. Five to seven large ruffled flowers of good substance open at one time.

Don't overlook this variety.

Leona

(Pruitt)

A most beautiful rich rose red, carrying six to eight fine ruffled blooms open on a tall slim wiry spike that never crooks under normal growing conditions. This variety has been greatly admired by everyone who has seen it. Was first seedling the summer of 1937 at the Havre de Grace Gladiolus show.

VALERIA

Oregon State

(Ben Bones-Salbach, 1940)

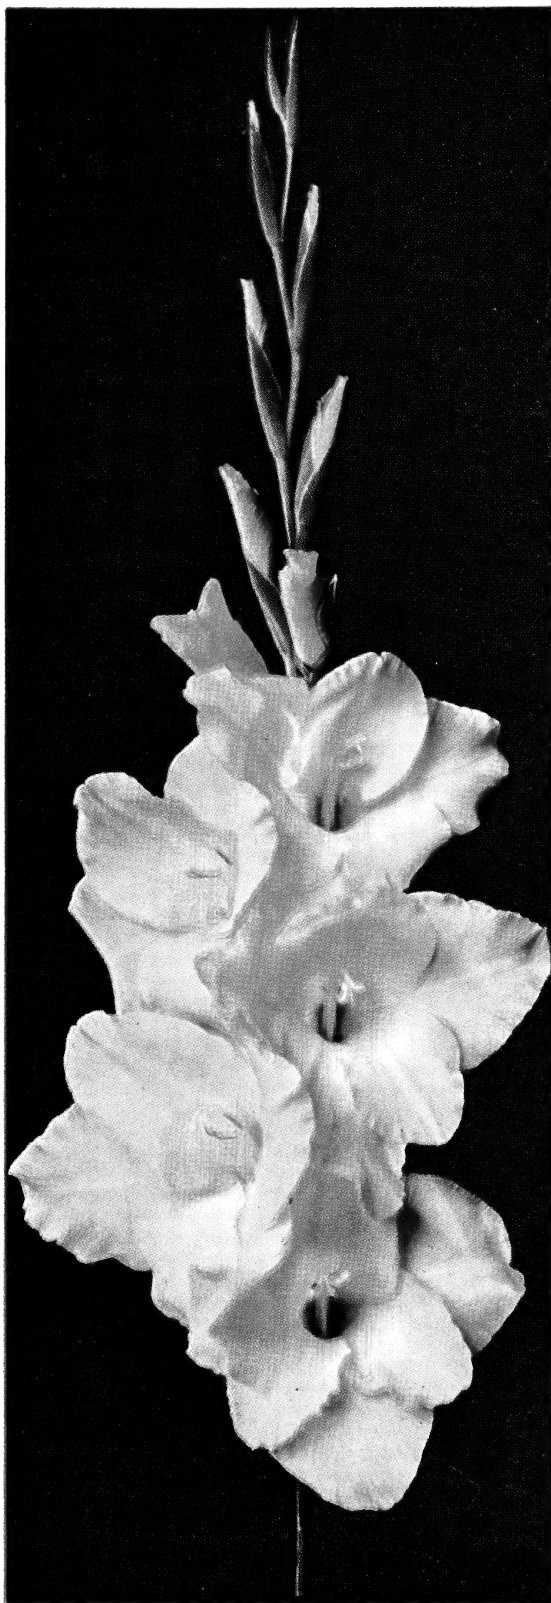

All who know Picardy will recognize this new variety as having a definite place in the gladiolus world. A seedling of Picardy, it has the large well placed flowers on tall stems. The stems do not crook and the flowers, a warm salmon with cream throat, do not fade in hot weather. Won first prize in the 1939 Grants Pass Show.

McKenzie river among

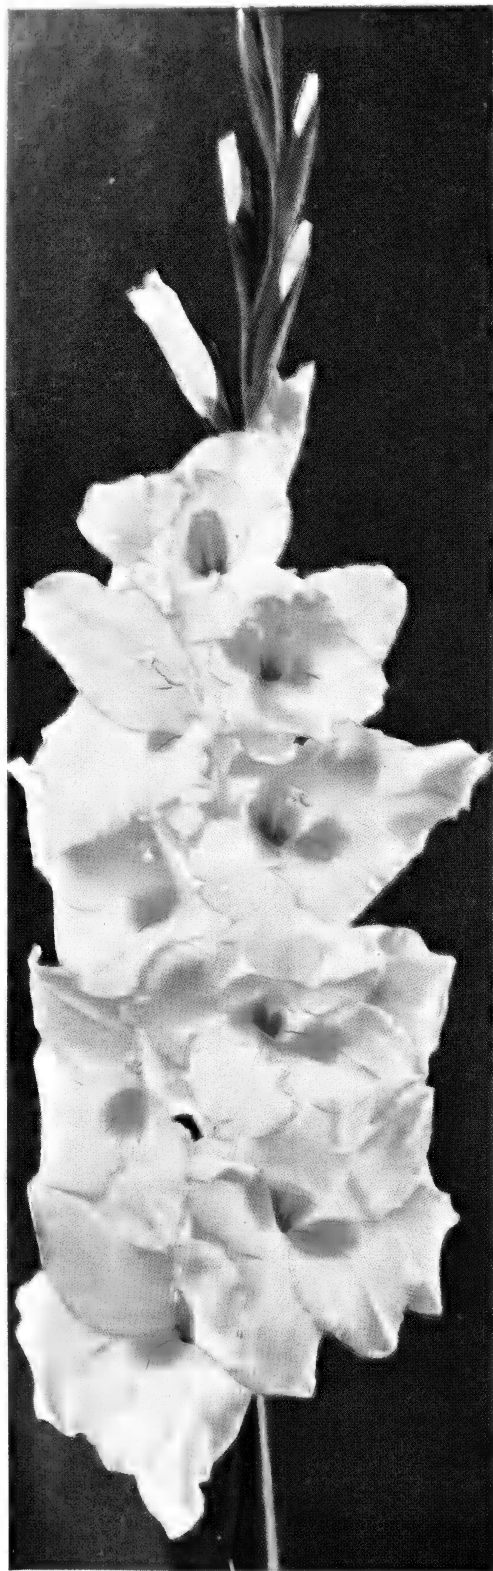

Overhead irrigation and Oregon sunshine help to grow Pruitt's superior gladiolus bulbs.

Our bulbs are grown by up-to-date methods on the rich alluvial silt of the McKenzie river, in the famous Willamette Valley.

and Donald on the bank of the
among the Minuets.

Helen of Troy

(Salbach, 1939)

Plant Patent No. 357

This should easily become as popular a gladiolus as Picardy. The giant sized flowers, often 7-8 in. across, are apricot and pink with a smokey blotched throat faintly edged in scarlet. They are borne on tall, stately spikes, with 6 to 8 florets open at a time. All are well placed and of fine substance. Predictions are, from prizes already taken, that Helen of Troy will become a very famous exhibition gladiolus.

HELEN OF TROY (Plant Pat. 357)

Beacon

(Palmer)

Clear bright rose-scarlet with large cream blotch. Well named Beacon for it is a large, showy variety, equally suited to exhibition or commercial culture. Opens 8 to 10 medium, somewhat ruffled blooms on a very tall, straight, but willowy spike. One of the real outstanding gladiolus.

	Large	Medium	Small

Zuni —Best smokey in the market	10	1.20	.60	.30	100	.40

MYRNA

Myrna

We think we are safe in saying Myrna has gone over almost the equal of any of the recent introductions.

We will not use any space to mention the winnings it has made over the country, which are many. We just received an order from a California customer who liked Myrna so well they named their new baby girl for it. Thanks to the mother and father; may they never regret it. Those of you who have not tried Myrna should do so this year.

	Large	Medium	Small
Each	\$.75	\$.50	\$.25
Per 10	5.00	3.50	2.00

Bulblets: 5 for 45c;
10, 80c; 100, \$5.00.
